

Post Operative Instructions for LEEP/Cryosurgery

After cryosurgery you will notice a watery, sometimes blood-tinged vaginal discharge, for a few days-possibly weeks. You will need to wear a pad or panty liner until the drainage ceases. **DO NOT USE TAMPONS.**

If you have severe vaginal bleeding with large clots, (soaking maxi-pads every 30 minutes) please call us.

Occasionally you may experience some uterine contractions similar to menstrual cramps. Providing you are not allergic, ibuprofen 400mg is often effective to reduce this discomfort.

Call the office if you experience severe pain, fever, or chills.

Sexual intercourse is prohibited for 30 days after cryosurgery or LEEP.

You will need to return to the office for a repeat pap smear three to four months after your surgery. Please call the office a month ahead of time to schedule your appointment.
